

**Jack Corbit Korean Pine**

*Pinus koraiensis 'Jack Corbit'*

Height: 20 feet

Spread: 15 feet

Sunlight: ○

Hardiness Zone: 3b

**Description:**

This variety is conical, displaying beautiful bluish-green needles on elegant upswept branches; an impressive landscape accent

**Ornamental Features**

Jack Corbit Korean Pine is primarily valued in the landscape for its distinctively pyramidal habit of growth. It has silvery blue-variegated rich green foliage. The needles remain green throughout the winter. The shaggy gray bark is extremely showy and adds significant winter interest.

**Landscape Attributes**

Jack Corbit Korean Pine is a dense evergreen tree with a strong central leader and a distinctive and refined pyramidal form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance tree. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. It has no significant negative characteristics.

Jack Corbit Korean Pine is recommended for the following landscape applications;

- Accent

**Planting & Growing**

Jack Corbit Korean Pine will grow to be about 20 feet tall at maturity, with a spread of 15 feet. It has a low canopy with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live to a ripe old age of 120 years or more; think of this as a heritage tree for future generations!

This tree should only be grown in full sunlight. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is not particular as to soil type or pH. It is quite intolerant of urban pollution, therefore inner city or urban streetside plantings are best avoided. This is a selected variety of a species not originally from North America.
