Height: 3 feet

Spread: 18 inches

Spacing: 14 inches

Sunlight:

Hardiness Zone: 4a

Group/Class: Asiatic Hybrid

Description:

A large and showy garden lily with wide, six petaled flowers on long straight stems; petals are white with dramatic hot pink stripes, and heavily freckled; these long lived perennials are a garden must

Ornamental Features

Tiger Woods Lily features bold white trumpet-shaped flowers with hot pink overtones and hot pink spots at the ends of the stems from mid to late summer. The flowers are excellent for cutting. Its narrow leaves remain green in color throughout the season.

Landscape Attributes

Tiger Woods Lily is an herbaceous perennial with a rigidly upright and towering form. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This plant will require occasional maintenance and upkeep, and should be cut back in late fall in preparation for winter. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects
- Disease

Tiger Woods Lily is recommended for the following landscape applications;

- Mass Planting
- General Garden Use

Planting & Growing

Tiger Woods Lily will grow to be about 30 inches tall at maturity, with a spread of 18 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 14 inches apart. The flower stalks can be weak and so it may require staking in exposed sites or excessively rich soils. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by multiplication of the underground bulbs; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
